

Gearbox housing

Cycle time savings and improved process reliability.

Customer application

The customer, a manufacturer of gearbox housings, was looking for a more efficient solution for applying back spotfacings.

Solution

HEULE recommended the following BSF counterboring tool.

Customer benefit

Thanks to BSF, machining is faster and more reliable, i.e. without needing to stop the machine nor re-clamp the workpiece. The customer benefits from reduced cycle times and improved process reliability.
